Product specifics
The MV3 solar integration system of MECOSUN allows for coverage of industrial, agricultural and residential buildings using rails for sealing the building, without sublayer. The materials used are recyclable and selected for their resistance to climatic conditions. Adaptable to any type of frame and panels (only framed modules), the system is the first MV3 photovoltaic structure that meets the criteria for building integration technology according to the technical specification CSTB No. 21/10-08 (valid for France).
