Product specifics

SunStyle mainly consists of square solar tiles, which are laid like scales directly on the appropriate roof substructure and they replace the conventional roof tiles. They perform all the functions of a conventional roof (water-tightness, strength and durability). It is equally suitable for large-scale industrial buildings as well as for small and large residential buildings and can be integrated into different roof shapes. The edges of the tile are sealed and an aluminum frame is not necessary (to keep out moisture).
